IDENTITY & ACCESS MANAGEMENT SERVICES

Enabling Secure Any to Any Access...

Identity and Access Management deals with identifying individuals and controlling access to resources for which they are authorized across the enterprise. With the proliferation of “as a service” applications accessed over the Internet from an increasing array of mobile devices, together with an alarming increase in the occurrence of Identity Theft, Identity and Access Management challenges are taking center stage in the realm of proactive security concerns globally. Our deep experience with Identity and Access Management issues and solutions uniquely position ASG to help our clients efficiently and cost effectively automate the granting, management, and compliance verification of access to the organization’s most valuable information assets from anywhere and any device, at any time.

The Identity & Access Management Practice at ASG

offers a suite of services targeted at helping our clients automate the granting, management, and reporting on access to the organization’s information systems and data assets. We offer world class talent with demonstrated expertise, proven methodology, ready to augment your team, or deliver a full solution.

Whether you need a third party assessment, an expert to assist your team in a major identity and access management initiative, or help selecting the right technology solutions, we’ve got the world class talent that can get the job done. For more information, have your ASG Account Executive schedule a meeting with our Identity and Access Management Practice Leader.
